

Indianapolis, Indiana

Indianapolis Motor Speedway Control Tower

4790 W. 16th St.
Indianapolis, IN 46222

Adjustable Forms of Indiana constructed the 5-level control tower in 2000. The new structure was a substantial upgrade to the famous track, currently the second oldest in the world.

This was a particularly enjoyable project for Adjustable Forms. During preliminary time trials and carburetion day, Adjustable's employees worked above Formula One race cars as they sped past at 200 miles per hour. Exposed concrete is complimented by blue-green perimeter glazing, giving the tower a modern touch to a classic American track.

Client

Indianapolis Motor Speedway
