

Chicago, Illinois

Walton on The Park South Tower

1 W. Walton St.
Chicago, IL 60610

Walton on The Park South Tower is the first of two condominium towers joined together at its base. Reaching 32 levels, the tower also features 5 levels of below grade parking that are constructed simultaneously with the tower. This is the third top-down high rise completed by Adjustable Forms.

Adjustable has utilized an edge protection safety system on this project to ensure complete enclosure of the working deck. The massive 1.77 acre site encompasses a full city block, with significant pedestrian traffic near adjacent Washington Square Park. The EPS system reduced wind related delays, allowed a more secure working environment, and ensured that materials and equipment stayed on the building during the most severe weather.
